Eur J Heart Fail 2021;23:352–380

Universal definition of heart failure

Bozkurt B, et al. Eur J Heart Failure 2021;23:352–380

Scope of heart failure prevention

ACC/AHA Stages of HF

AHA/ACC Stages A, B C, D

- A.** At high risk for HF but no structural heart disease or HF symptoms.
- B.** Structural heart disease but no HF signs or symptoms.

- C.** Structural heart disease with prior or current HF symptoms.
- D.** Refractory HF requiring specialized interventions.

NYHA Class I, II, III, IV

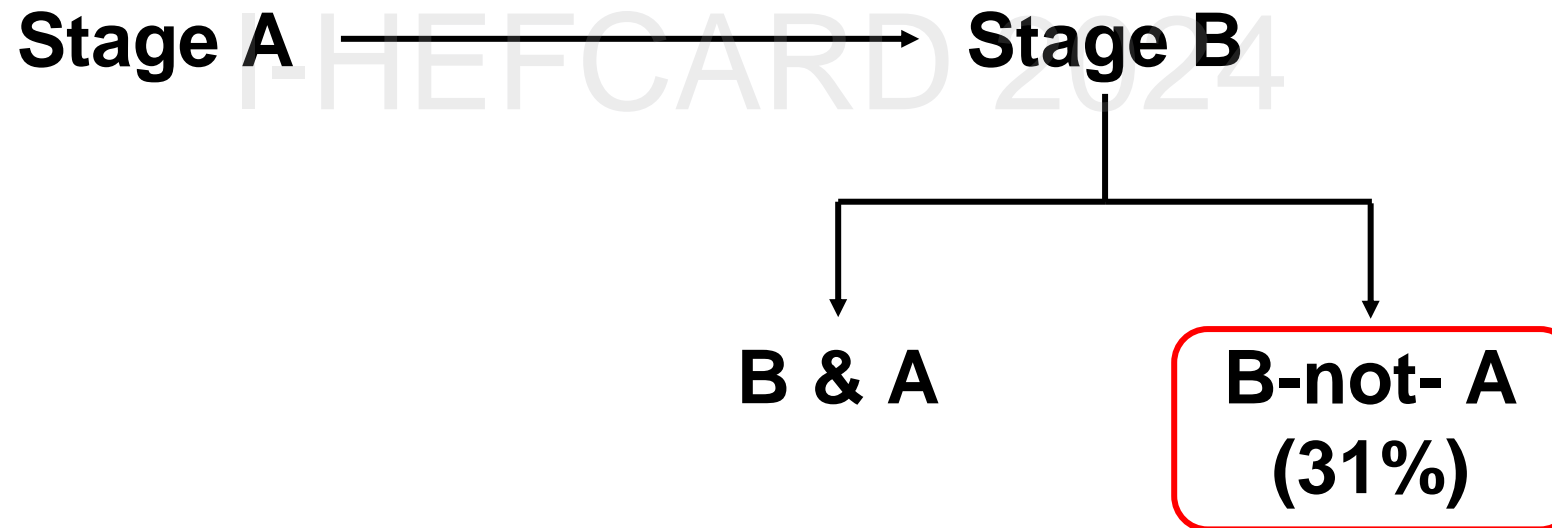

- I.** No limitation of physical activity.
- II.** Slight limitation of physical activity.
- III.** Marked limitation of physical activity.
- IV.** Inability to carry on any physical activity.

Advanced HF

Intermacs Profiles
1 to 7

Adapted from Truby et al, J am Coll Cardio HF 2020; 8(7) 523-36

Prevalence and determinants of the precursor stages of heart failure: results from the population-based **STAAB** cohort study

Natural History of Asymptomatic Left Ventricular Systolic Dysfunction in the Community

Thomas J. Wang, MD; Jane C. Evans, DSc; Emelia J. Benjamin, MD, ScM; Daniel Levy, MD;
Elizabeth C. LeRoy, BS; Ramachandran S. Vasan, MD

Some asymptomatic LV dysfunction (LVEF $\leq 50\%$) subjects died of cardiovascular causes without passing through a symptomatic phase of CHF.

Circulation. 2003;108:977-982

Risk factors and comorbidities involved in the development of HFrEF and HFpEF

Simmonds SJ, et al. Cells 2020;9:242

Integrating natriuretic peptides and diastolic dysfunction to predict adverse events in high-risk asymptomatic subjects

Gori M, et al. Eur J Preventive Cardiology 2021;28:937–945

Heart failure prevention deserves high priority

Global Burden of Heart Failure

Prevalence

Prevalence 1-3% in
general adult
population

Overall
prevalence

Prevalence
in HFrEF

Prevalence
in HFpEF

Incidence

Incidence
1-20 cases per 1,000
person-years or per
1,000 population

Incidence
stable/
declining

Incidence
in HFrEF

Incidence
in HFpEF

Mortality

Mortality remains high

30-day
Mortality ~2-3%
1-year
Mortality ~15-30%
3-year
Mortality ~30-50%
5-year
Mortality ~50-75%

CVD
HFrEF

Non-
CVD
HFpEF

Costs

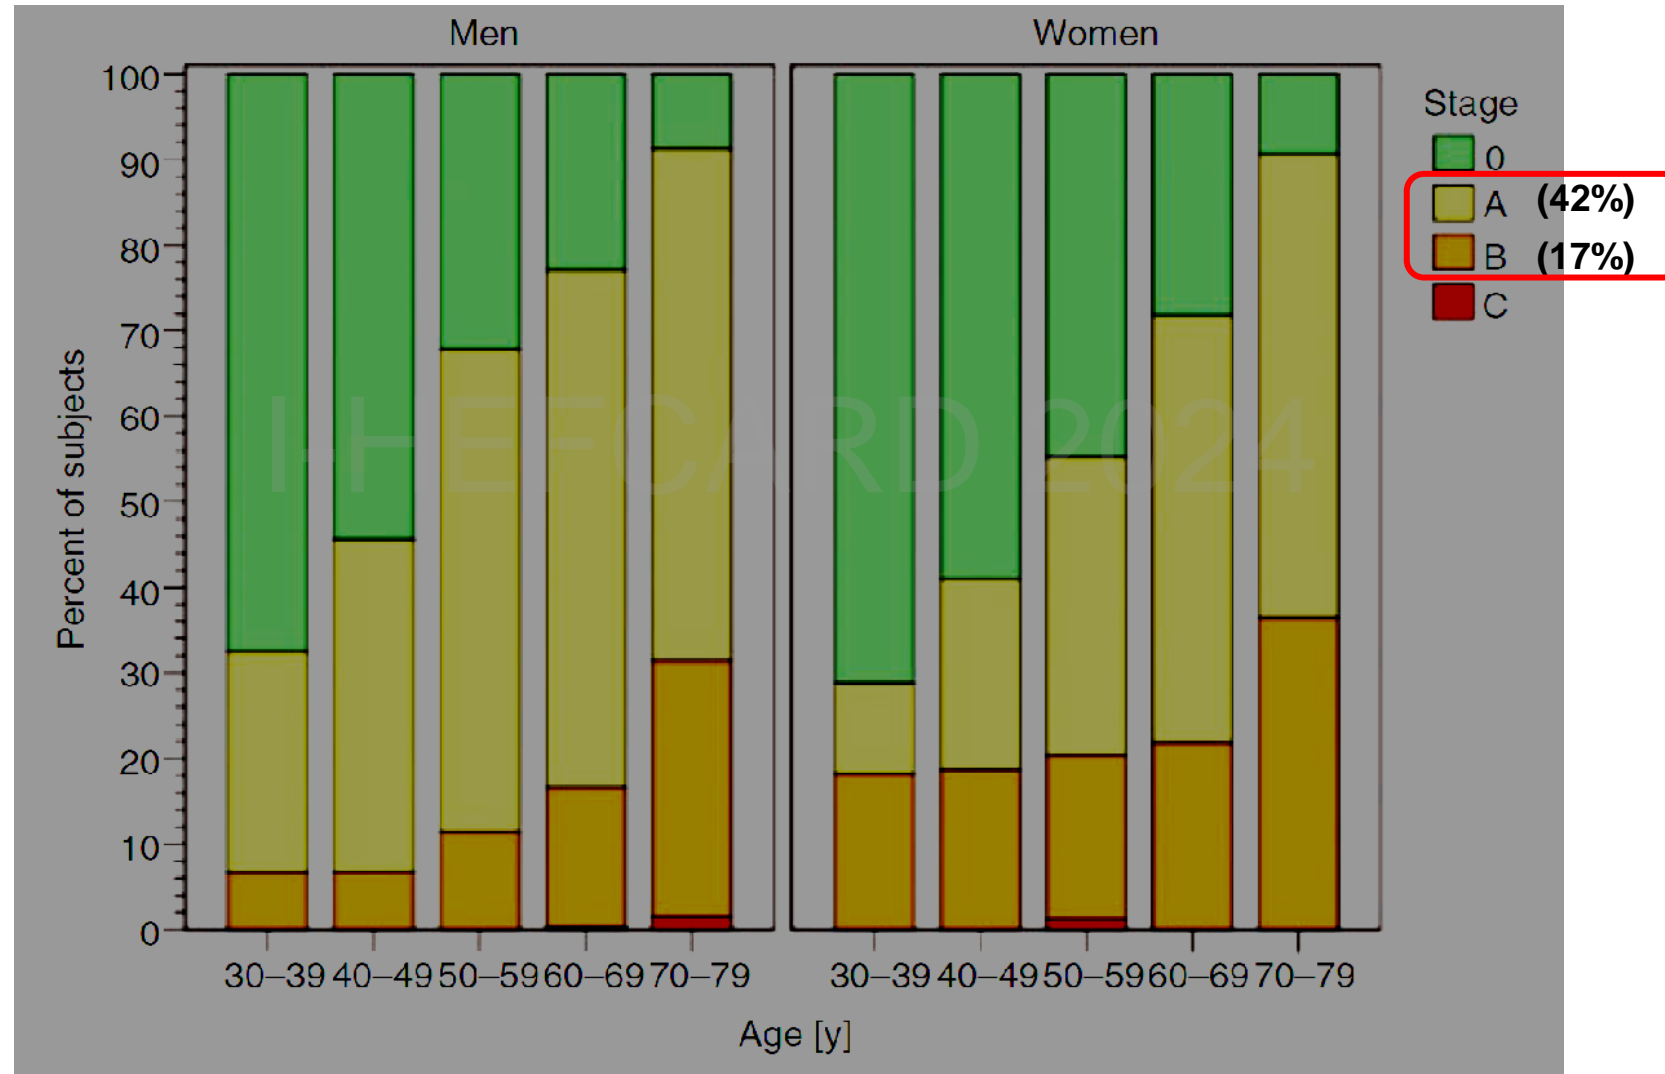

Annual health care
costs up to
€25,500 per year

Increasing due to major
demographic changes
(>65 years)

Main cost drivers:

- Directs costs (~70%)
- Non-CVD comorbidities
- Invasive procedures
- Medications/Diagnostics
- Outpatient visits

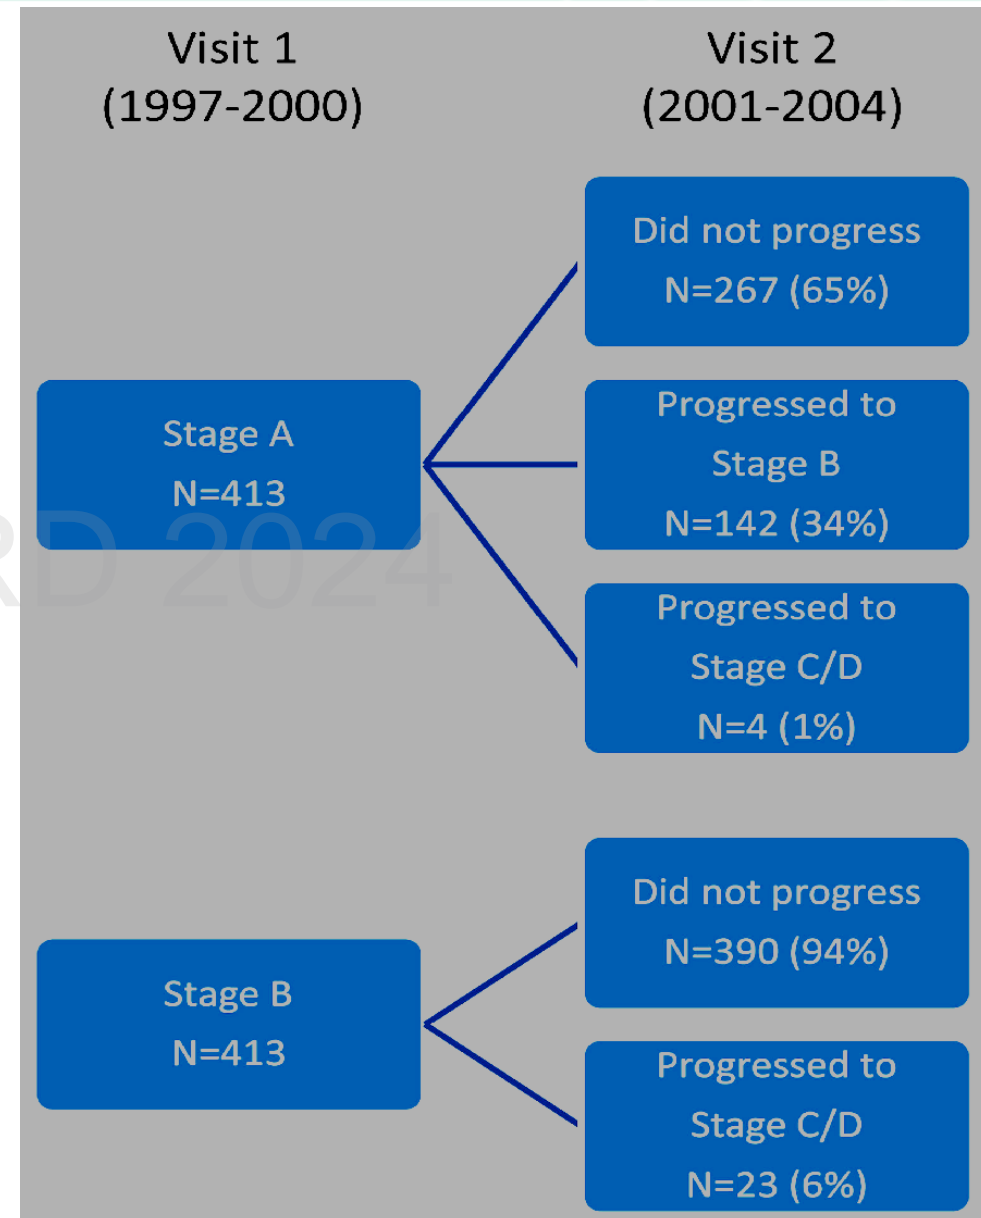

Crude distribution of heart failure stages 0, A, B, and C in men and women, by age decades

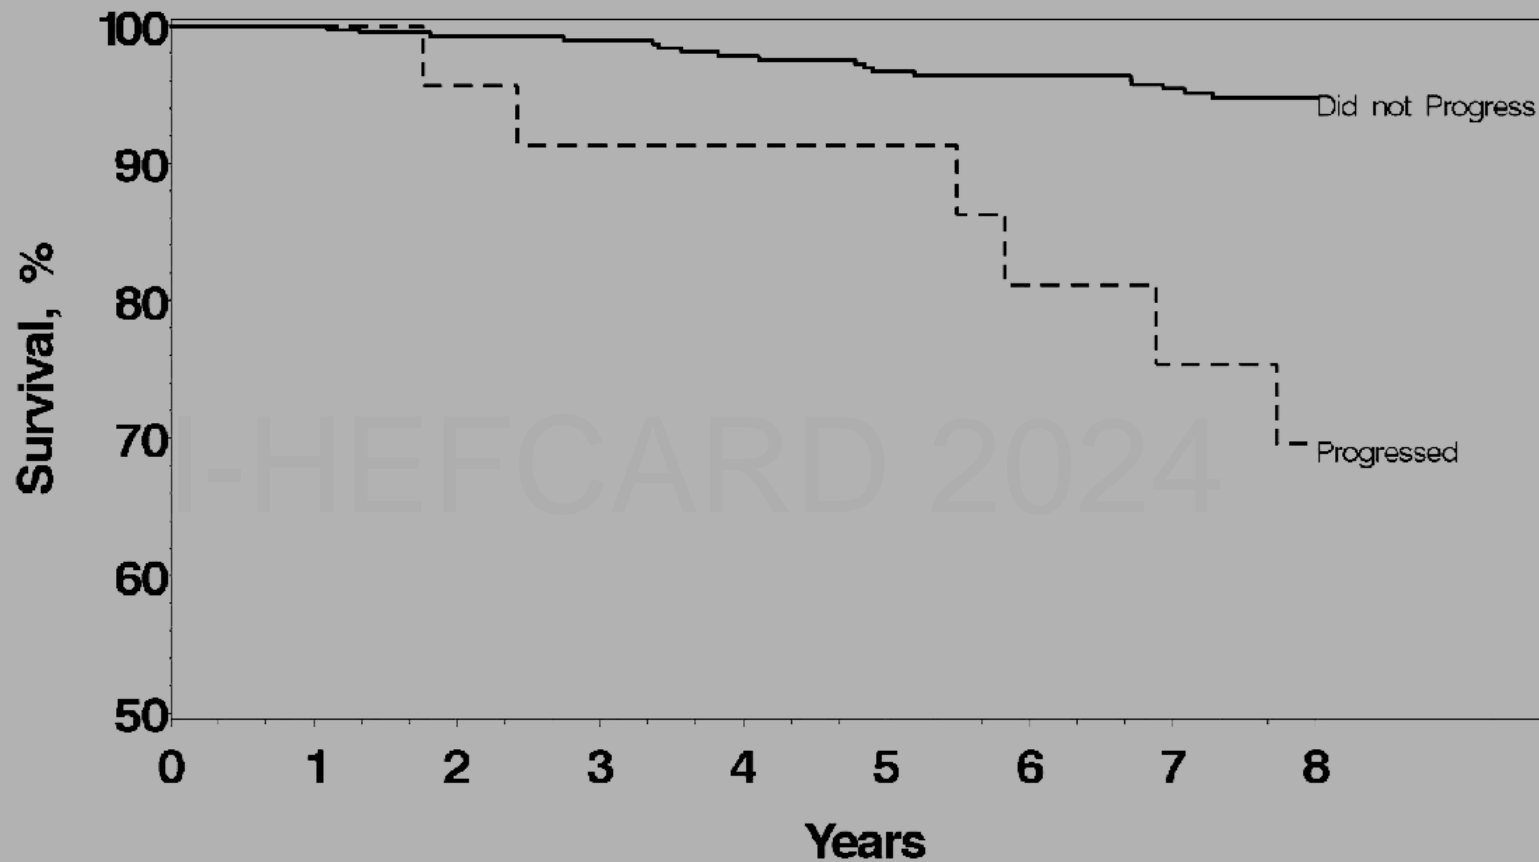

Progression in Heart Failure Stage

2022 AHA/ACC/HFSA Guideline for the Management of Heart Failure: A Report of the American College of Cardiology/American Heart Association Joint Committee on Clinical Practice Guidelines

Areas of focus include:

- Prevention of HF.
- Management strategies in stage C HF, including:
 - New treatment strategies in HF, including sodium-glucose cotransporter-2 inhibitors (SGLT2i) and angiotensin receptor-neprilysin inhibitors (ARNi).
 - Management of HF and atrial fibrillation (AF), including ablation of AF.
 - Management of HF and secondary MR, including MV transcatheter edge-to-edge repair.
- Specific management strategies, including:
 - Cardiac amyloidosis.
 - Cardio-oncology.
- Implantable devices.
- Left ventricular assist device (LVAD) use in stage D HF.

2021 ESC Guidelines for the diagnosis and treatment of acute and chronic heart failure

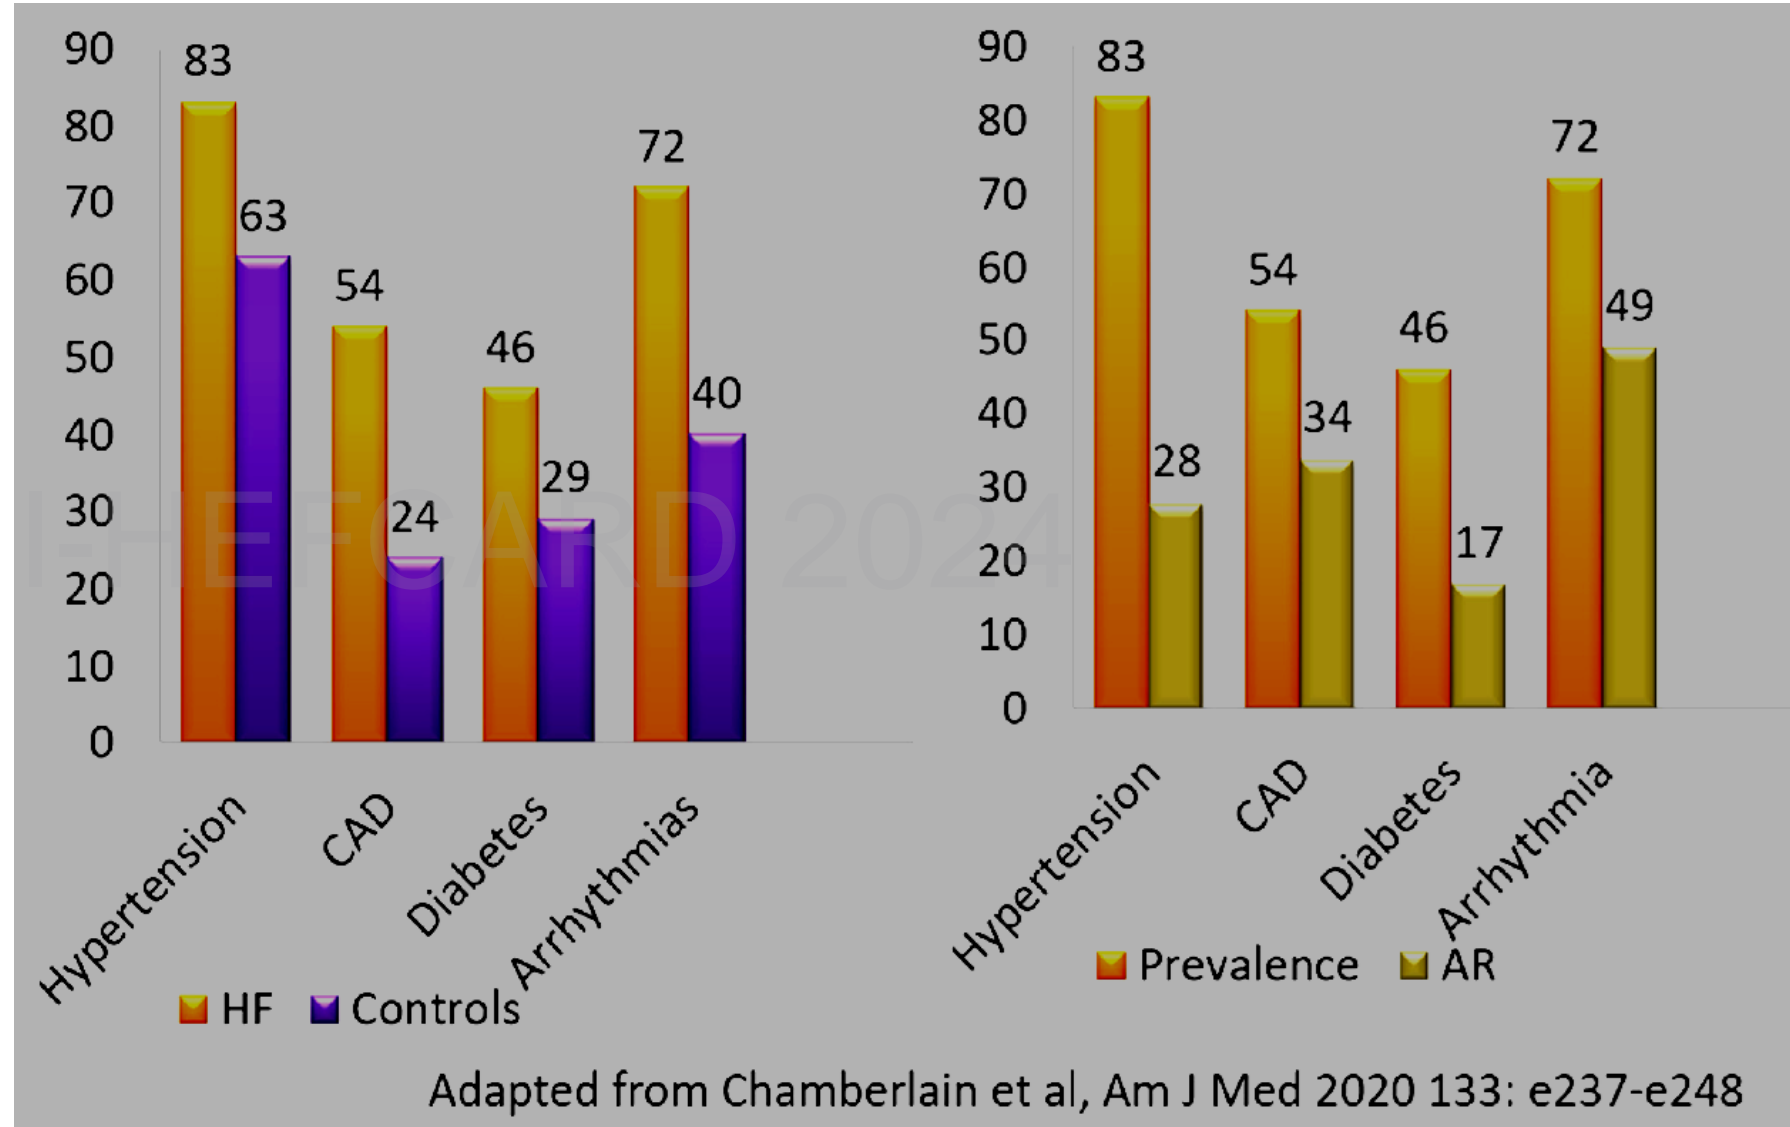

Developed by the Task Force for the diagnosis and treatment of acute and chronic heart failure of the European Society of Cardiology (ESC)

In this guideline, we have decided to focus on the diagnosis and treatment of HF, **not on its prevention**. Management of CV risk and many CV diseases [especially systemic hypertension, diabetes mellitus, coronary artery disease, myocardial infarction (MI), atrial fibrillation (AF), and asymptomatic left ventricular (LV) systolic dysfunction] will reduce the risk of developing HF, which is addressed by many other ESC Guidelines and in **section 9.1** of the current guideline.^{2–7}

Prevention from developing stage A heart failure

Prevalence and attributable risk (AR) of comorbidities in heart failure

How to Prevent Heart Failure

Prevention from developing stage B heart failure

Risk factors for heart failure

Sedentary habit
Cigarette smoking
Obesity
Excessive alcohol intake²⁸⁶

Influenza
Microbes (e.g. *Trypanosoma cruzi*, Streptococci)

Cardiotoxic drugs (e.g., anthracyclines)

Chest radiation

Hypertension

Dyslipidaemia

Diabetes mellitus

CAD

Preventive strategies

Regular physical activity
Cigarette smoking cessation
Physical activity and healthy diet
General population: no/light alcohol intake is beneficial

Patients with alcohol-induced CMP should abstain from alcohol

Influenza vaccination

Early diagnosis, specific antimicrobial therapy for either prevention and/or treatment

Cardiac function and side effect monitoring, dose adaptation, change of chemotherapy

Cardiac function and side effect monitoring, dose adaptation

Lifestyle changes, antihypertensive therapy

Healthy diet, statins

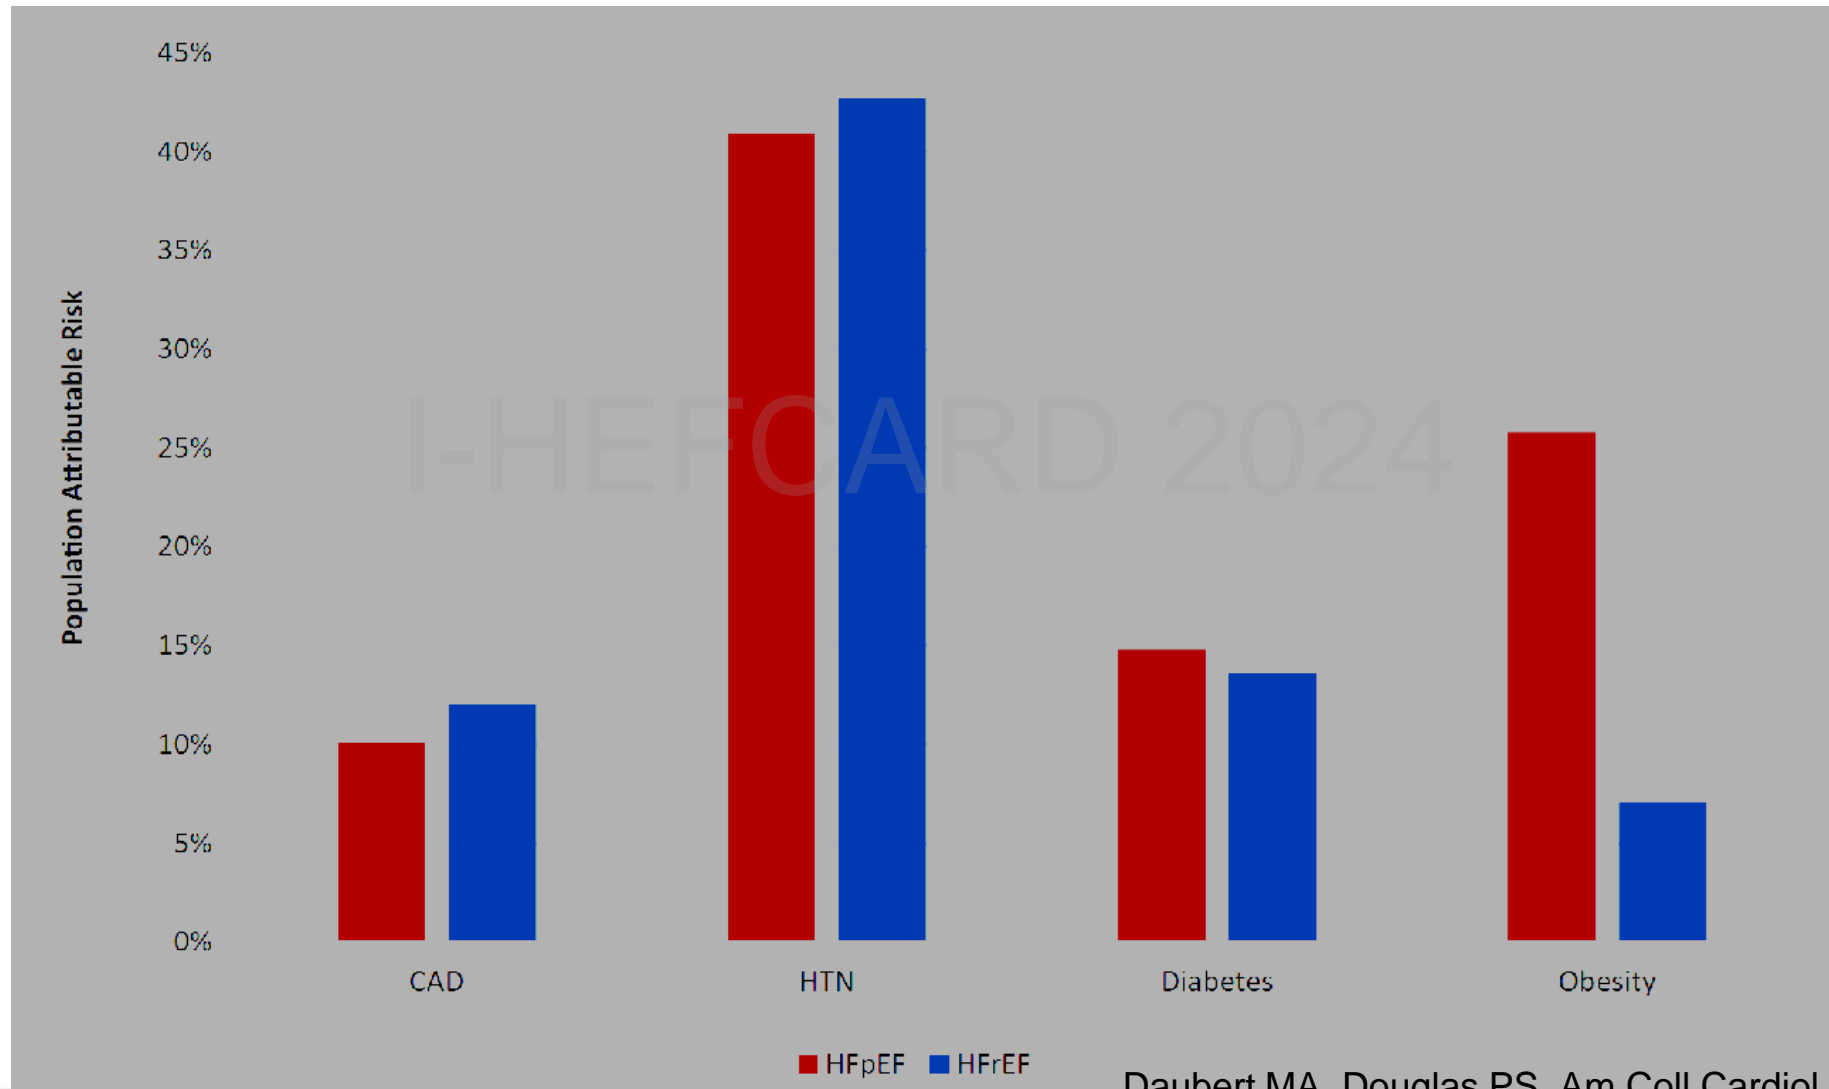

Physical activity and healthy diet, SGLT2 inhibitors

Lifestyle changes, statin therapy

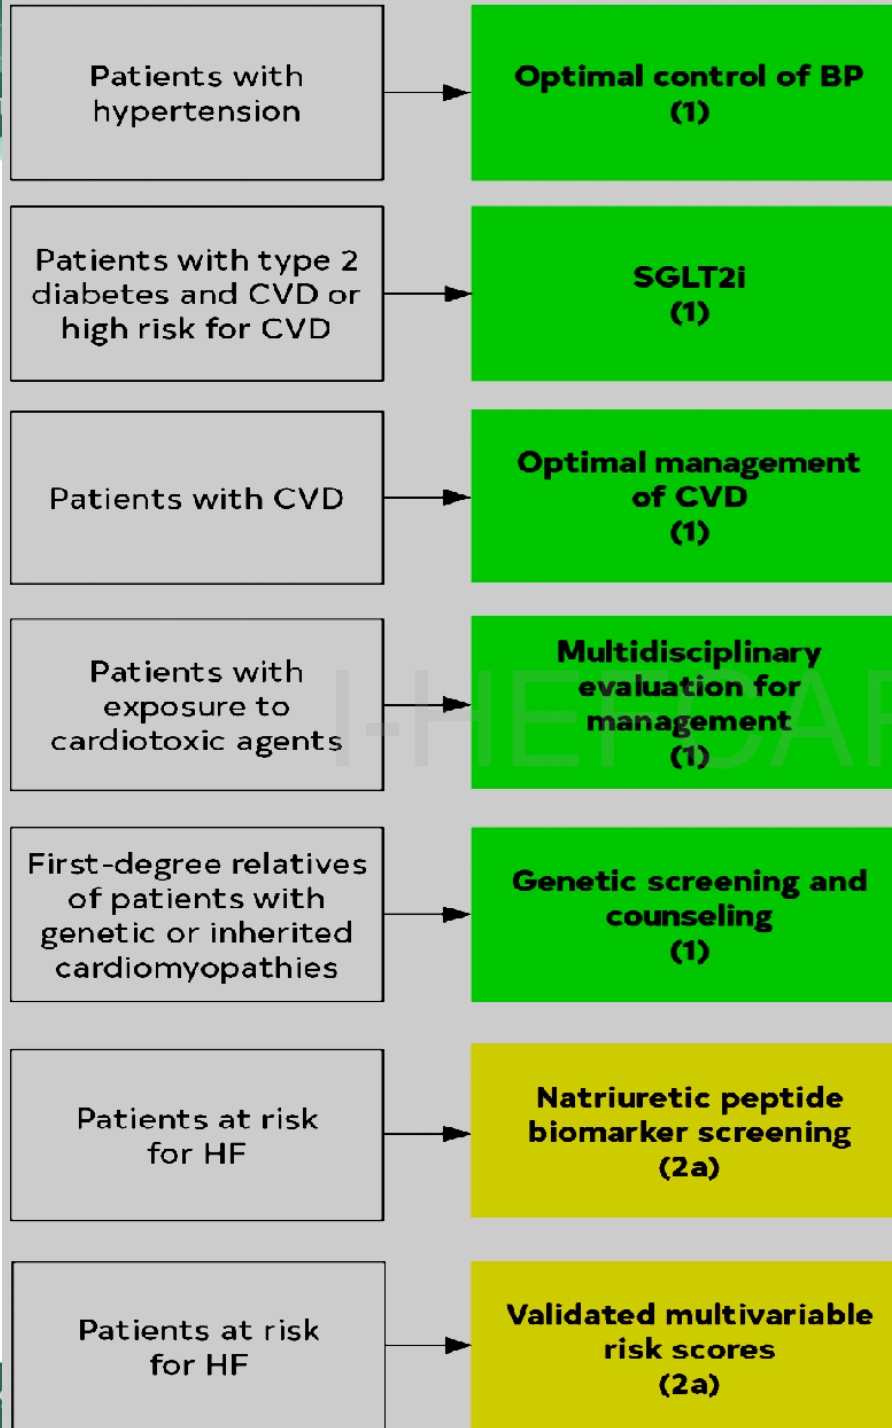

McDonagh TA, Metra M, et al.

Eur Heart J 2021;00:1-128

Population attributable risk of comorbidities for HFpEF and HFrEF in women

. Daubert MA, Douglas PS. Am Coll Cardiol HF 2019;7:181–91

Recommendations for Patients at Risk of HF (Stage A)

Heidenreich PA, et al. Circulation. 2022;145:e895–e1032

Recommendations for Cardio-Oncology (Continued)

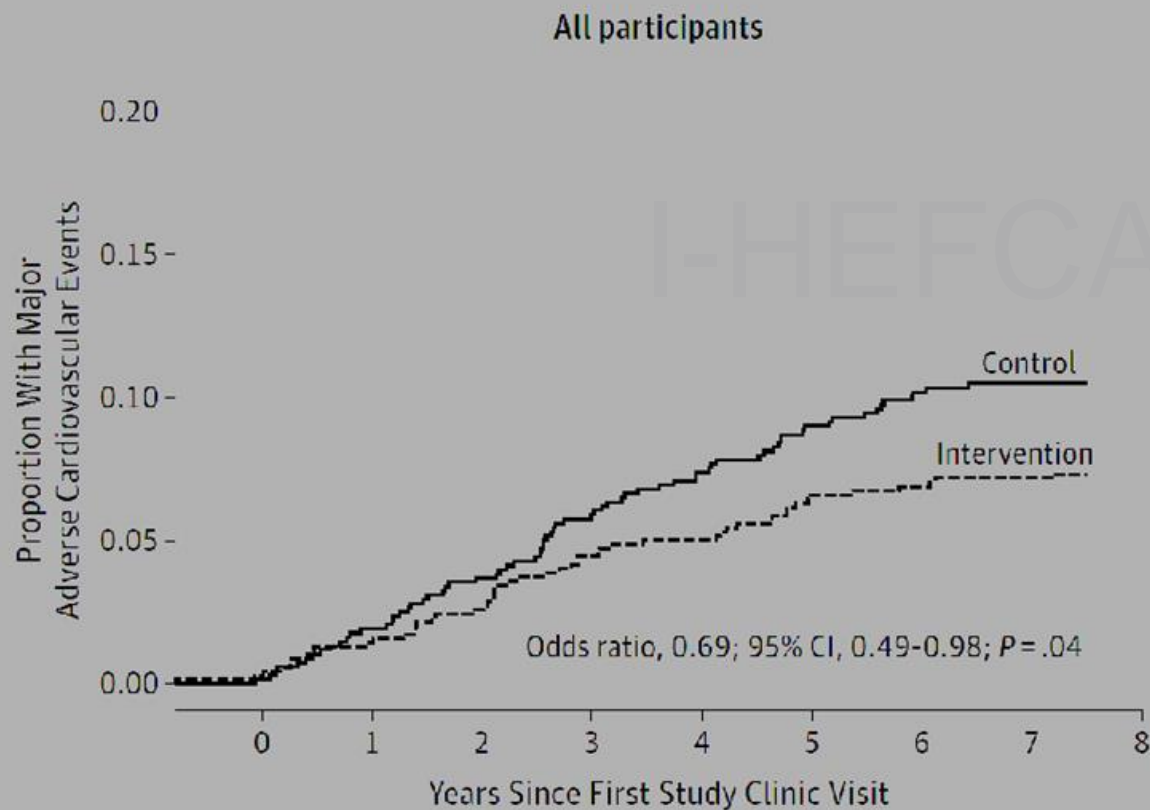

COR	LOE	Recommendations
2a	B-NR	3. In patients with cardiovascular risk factors or known cardiac disease being considered for potentially cardiotoxic anticancer therapies, pretherapy evaluation of cardiac function is reasonable to establish baseline cardiac function and guide the choice of cancer therapy. ^{2,5–16}
2a	B-NR	4. In patients with cardiovascular risk factors or known cardiac disease receiving potentially cardiotoxic anticancer therapies, monitoring of cardiac function is reasonable for the early identification of drug-induced cardiomyopathy. ^{2,4,6,8}

COR	LOE	Recommendations
1	B-NR	1. In first-degree relatives of selected patients with genetic or inherited cardiomyopathies, genetic screening and counseling are recommended to <u>detect cardiac disease</u> and <u>prompt consideration of treatments</u> to decrease HF progression and sudden death. ^{1,2}
2a	B-NR	2. In select patients with nonischemic cardiomyopathy, referral for genetic counseling and testing is reasonable to identify conditions that could guide treatment for patients and family members. ^{3,4}

**Risk of heart failure
related to DPP4
inhibitors**

Drug (trial)	Heart failure (%)	Nonstudy antidiabetic drugs	HR (95% CI) for Effect of DPP-4 Inhibitor
Sitagliptin (TECOS)	18	Metformin 81.6%; Insulin 23.2%; TZD 2.7%	1.00 (0.83–1.19) (in patients with no baseline HF: 0.96 [0.76–1.23])
Saxagliptin (SAVOR-TIMI 53)	12.8	Metformin 69.5%; Insulin 41.1%; TZD 6.0%	1.27 (1.07–1.51) (in patients with no baseline HF: 1.30 [2.03–2.65])
Alogliptin (EXEMINE)	27.9	Metformin 66.2%; Insulin 29.9%; TZD 2.4%	1.19 (0.90–1.58) (in patients with no baseline HF: 1.76 [1.07–2.90])
Omarigliptin (Protocol 018)	15.2	Metformin 77.4%; Insulin 34.9%; TZD 1.1%	0.60 (0.35–1.05) (no data for subgroup with no baseline HF); potential concern about competing risk
Linagliptin (CARMELINA)	27.2	Metformin 53.8%; Insulin 58.8%; Sulfonylurea 31.5%	0.90 (0.74–1.08) (in patients with no baseline HF: 0.92 [0.70–1.22])

Natriuretic Peptide-Based Screening and Collaborative Care for Heart Failure The STOP-HF Randomized Trial

Ledwidge M, et al. JAMA. 2013;310:66-74

Risk scores to predict development of incident HF

Risk Score	Year Published
Framingham Heart Failure Risk Score	1999
Health ABC Heart Failure Score	2008
ARIC Risk Score	2012
PCP-HF	2019

Heidenreich PA, et al. Circulation. 2022;145:e895–e1032

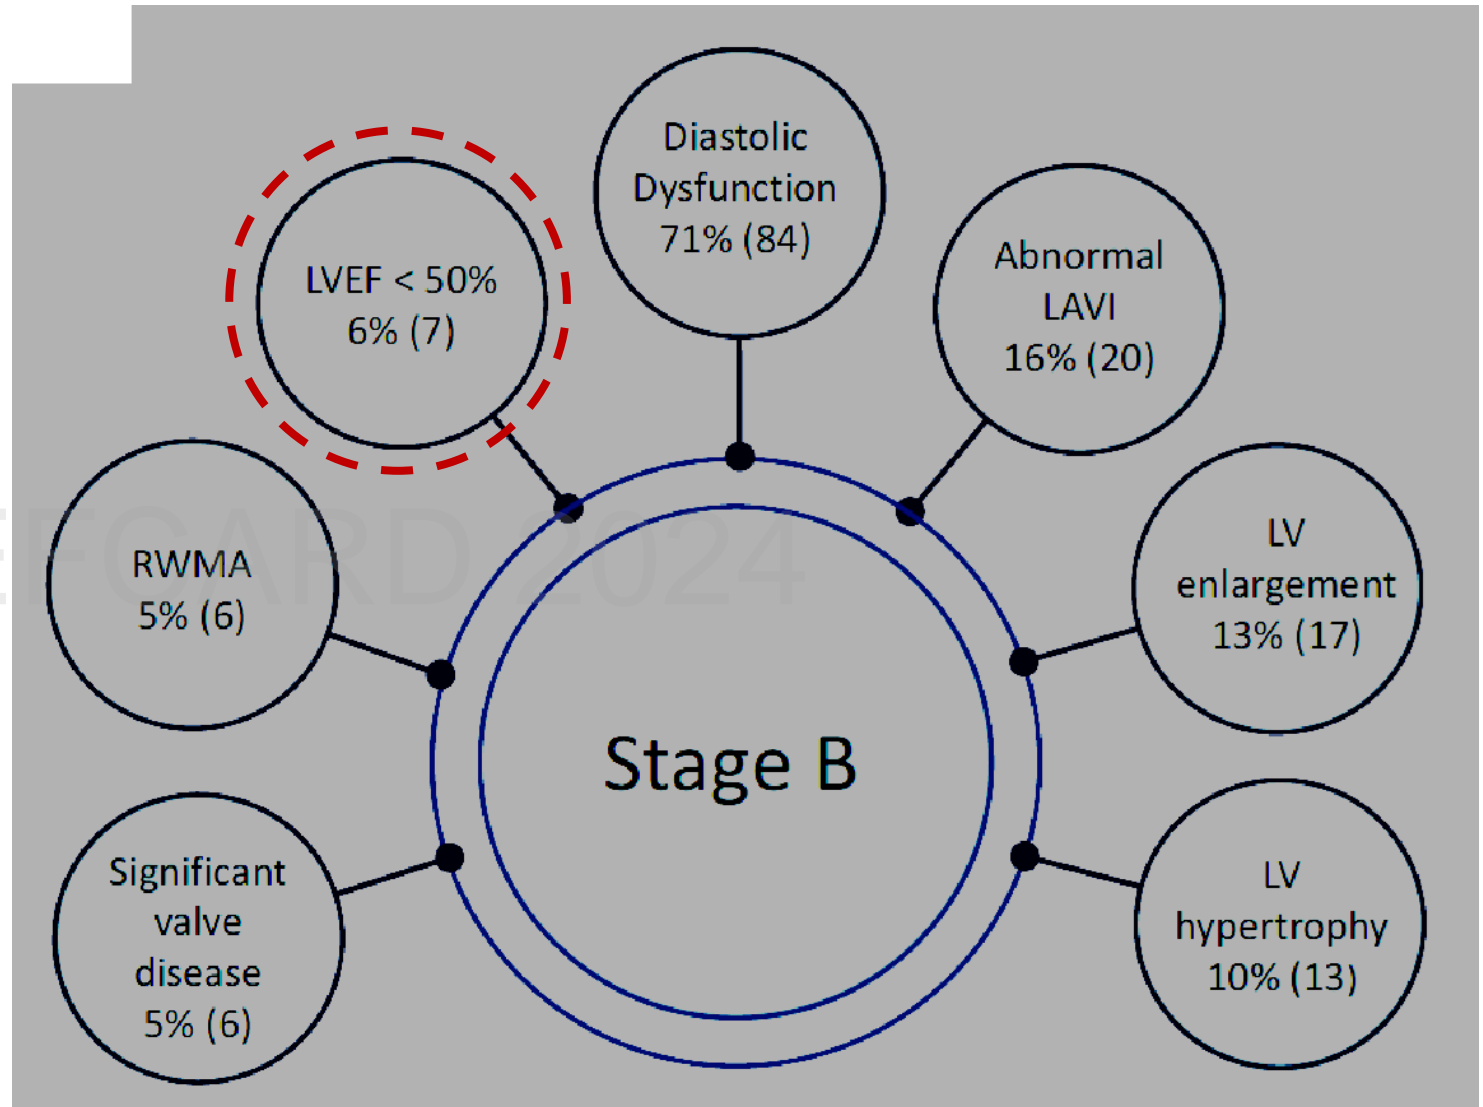

Prevention from developing stage C heart failure

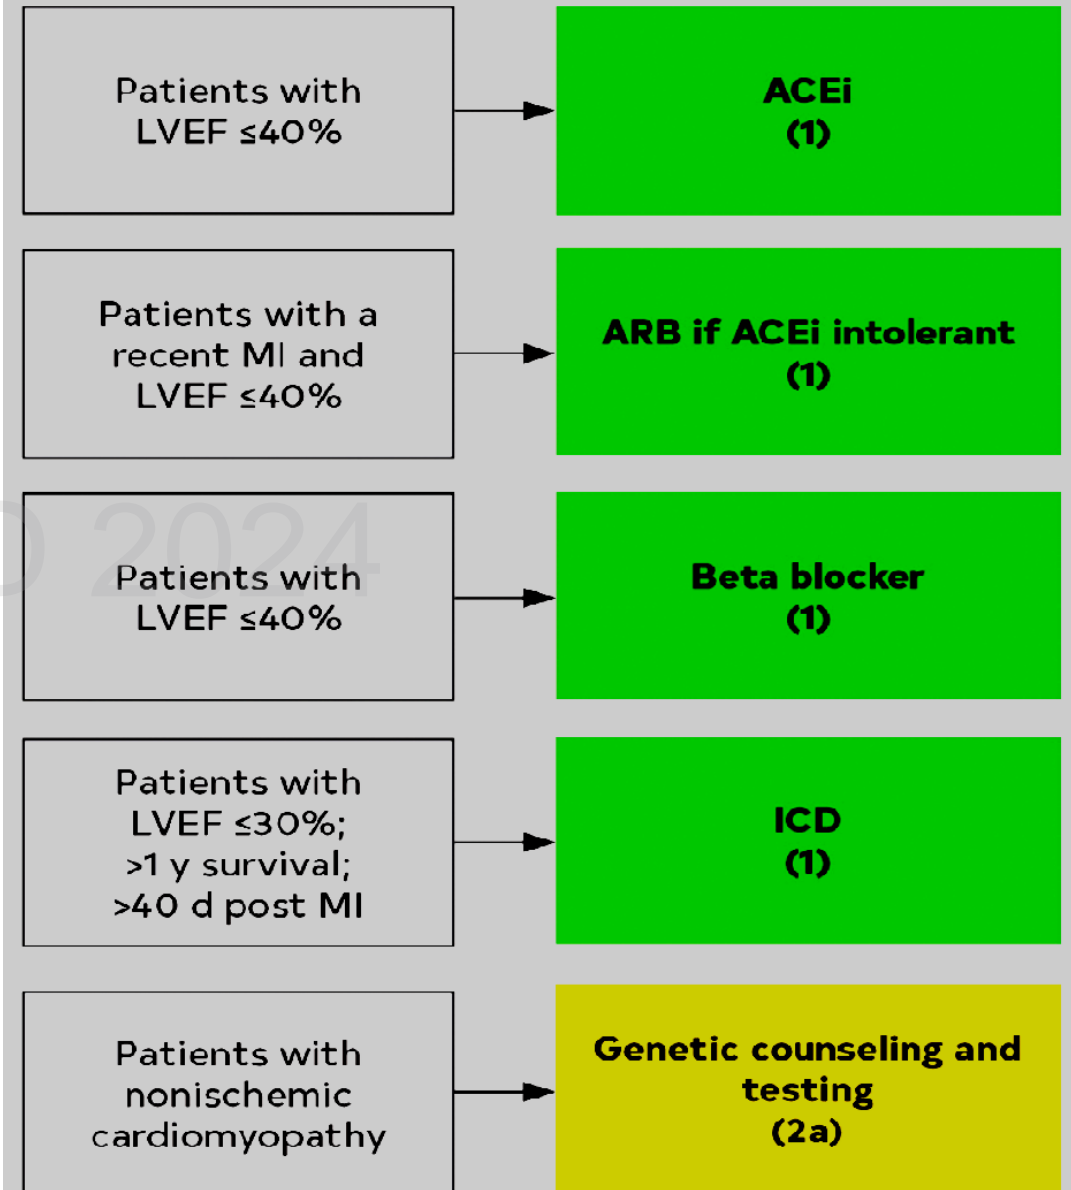

Suggested Thresholds for Structural Heart Disease and Evidence of Increased Filling Pressures

Morphology	<ul style="list-style-type: none"> • LAVI ≥ 29 mL/m² • LVMI $> 116/95$ g/m² • RWT > 0.42 • LV wall thickness ≥ 12 mm
Ventricular systolic function	<ul style="list-style-type: none"> • LVEF $< 50\%$ $\leq 40\%$ for prevention • GLS $< 16\%$
Ventricular diastolic function	<ul style="list-style-type: none"> • Average E/e' ≥ 15 for increased filling pressures • Septal e' < 7 cm/s • Lateral e' < 10 cm/s • TR velocity > 2.8 m/s • Estimated PA systolic pressure > 35 mm Hg
Biomarker	<ul style="list-style-type: none"> • BNP ≥ 35 pg/mL* • NT-proBNP ≥ 125 pg/mL*

Echocardiographic features of individuals in stage B heart failure

Recommendations for patients with pre-HF (stage B).

Heidenreich PA, et al. Circulation. 2022;145:e895–e1032

Treatment with an ACE-I and a beta-blocker (preferably carvedilol) should be considered in cancer patients developing LV systolic dysfunction, defined as a 10% or more decrease in LVEF and to a value lower than 50%, during anthracycline chemotherapy.

IIa

Angiotensin Receptor–Neprilysin Inhibition in Acute Myocardial Infarction

Characteristic	Sacubitril–Valsartan (N=2830)	Ramipril (N=2831)
Left ventricular ejection fraction — %	36.4±9.3	36.6±9.6
Previous heart failure	0	0

3: Harm	B-R	7. In patients with LVEF <50%, thiazolidinediones should not be used because they increase the risk of HF, including hospitalizations. ¹⁵
3: Harm	C-LD	8. In patients with LVEF <50%, nondihydropyridine calcium channel blockers with negative inotropic effects may be harmful. ^{16,17}

I-HEFCARD 2024

Take-home message

- **Heart failure prevention deserves high priority.**
- **Manage heart failure risk factors in accordance with guideline recommendation.**

Heidenreich PA, et al. Circulation. 2022;145:e895–e1032

Perspective for the non-cardiologist

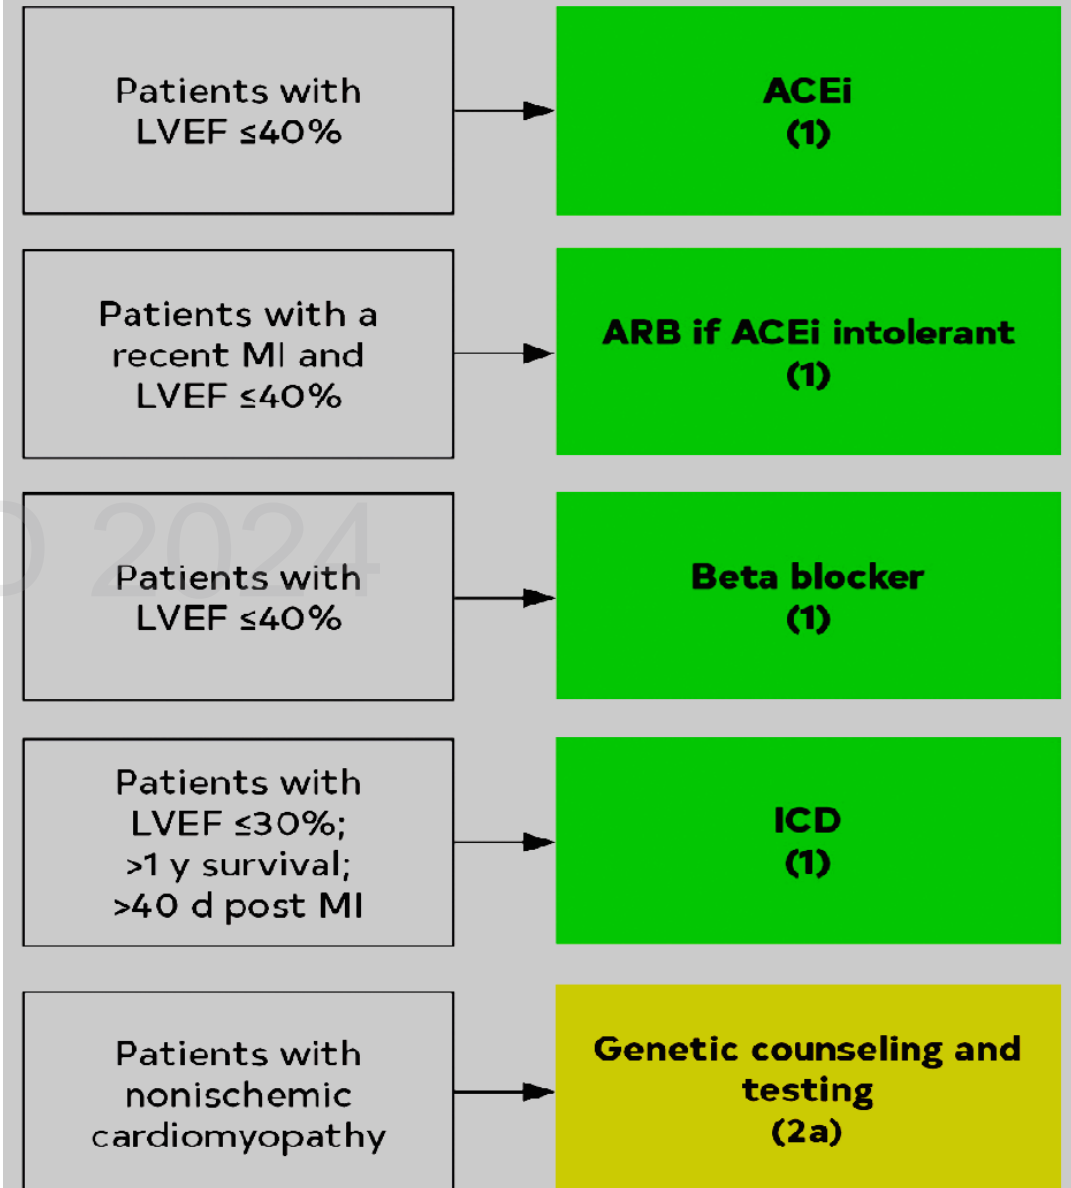

**In patients with T2DM and ASCVD or multiple risk factor for
ASCVD or CKD, SGLT2 inhibitors are recommended to
reduce the risk of heart failure hospitalization.**

Perspective for the cardiologist

Morphology	<ul style="list-style-type: none"> • LAVI ≥ 29 mL/m² • LVMI $> 116/95$ g/m² • RWT > 0.42 • LV wall thickness ≥ 12 mm
Ventricular systolic function	<ul style="list-style-type: none"> • LVEF $< 50\%$ $< 40\%$ for prevention • GLS $< 16\%$
Ventricular diastolic function	<ul style="list-style-type: none"> • Average E/e' ≥ 15 for increased filling pressures • Septal e' < 7 cm/s • Lateral e' < 10 cm/s • TR velocity > 2.8 m/s • Estimated PA systolic pressure > 35 mm Hg
